

I'm not robot!

Template engine examples. Html template engines.

Template engine based on Jinja2/Django templates Handlebars templating implemented in Rust Type-safe, compiled Jinja-like templates for Rust The liquid templating language for Rust Simple, lightweight template engine Templating for the Fluent localization framework Experimental Mustache-like templating engine a powerful template engine for Rust with minimal dependencies Rust Compiled Templates, efficient type-safe web page templates A collection of helpers for handlebars (rust) to manage string, json, yaml, toml, path, file, http request Type-safe, compiled Handlebars Optimized HTML escaping code, extracted from Askama Fast, minimal, feature-rich, xml-like formatting syntax for Rust! A blazing fast, type-safe template engine for Rust Initialize project from templates Simple Customizable String-Templating Library for Rust Library for basic server-side rendering written in pure rust Simple, small, and extremely fast template engine for Rust The Golang Templating Language for Rust Not a Template Engine. Derive Display using a template. A simple, powerful template engine A whitespace-aware quasiquoter for beautiful code generation Ast, lexer and parser for yarte Ultra-lightweight string templating library. No Dependencies Find And Replace string template engine positively mad, zero dependency hml templating language A template language library that allows multiple parameters to pass between templates The Perseus app that underlies Tribble A simple CLI generation tool for creating large datasets An HTML templating library Compile-time HTML templates Extensions for the Kvarn web server. Features HTTP/2 automatic push and a templating engine. Procedural macro package for yarte A safe and simple template engine with the ergonomics of JSX Adds a ({{switch}}) helper to handlebars-rust Dojang, an EJS like Html Template Engine Lightweight, fast, and powerful templating engine Code generator for OpenAPI specifications A snippet extractor for competitive programmers tegen is a Rust library designed to generate text from a given template Build svg playing cards from a template shell-like variable substitution Simple, small, and extremely fast template engine for Rust A Rust library for parsing Haml templates simplegen is a simple text buffer that maintains indentation for calls to println(). The contents of the buffer can be retrieved by calling the to_string() method. Macro Templating for the Fluent localization framework Fast, minimal, feature-rich, extended formatting syntax for Rust! A dsl for writing html. This is not an html template! Not complete but easily extensible. Template engine inspired by Jinja2 Fast, microscopic helper crate for runtime string interpolation A tiny template language for human-friendly string substitutions Very simple string template for Rust The macros needed for render A tool to randomize test generation to eliminate cheating Type-safe, compiled Handlebars Compile-time templates for displaying data in different markup formats Rust HTML templating based on Clojure's Hiccup Small macro HTML templating library A whitespace-aware quasiquoter for beautiful code generation An error reporter for panics and eyre::Report with handlebars template support A templating library for injecting variables from multiple external sources Compile time templating inspired by Mustache Rust implementation of RFC6570 - URI Template that can processURI Templates up and to including ones designated Level 4 The Golang Templating Language for Rust Small template engine with smarty like syntax Template based terminal coloring made really easy Mustache templating engine for rust A template engine to compile text and evaluate code from template files Simple, opinionated template engine A really small chatbot 'if and else module' Generate HTML for Twitter Card integration a templating library written in rust macros This crate is a template engine for Templo tool to insert arguments inside of text files Static Site Generation Utilities for RDXL Mustache templating engine for rust with a bugfix for lists Work with references: Literature database management, storage, and citation formatting Build documents with gemtext Library to initialize project from templates Fast and correct handlebars-compatible template engine Text User Interface library (TUI) with a template language and runtime Generates Content from Archetype Template Directories and Git Repositories rust_tmpl t4rust is a compile-time templating-engine which allows you to write plain rust code in your template Internal value format for gtmpl-rust Super templates (html, etc.) with Plain-Rust, no textfiles env_dir A static site generator where even content and config are templates Readable templates for code generation Creating compilable Rust source code templates Simple function based template engine Rust implementation of RFC6570 - URI Template that can processURI Templates up and to including ones designated Level 4 Create a RabbitMQ consumer project with minimal effort, by bypassing templating, configuration and complicated resiliency logic Easy-to-use, dynamic text template library The simple console utility and library to generate JSON Items Simple, small, and extremely fast template engine for Rust [mail] provides a way to create bind string template engines to produce mails Extra template filters for Askama static site generation library a very simple string (template) replacement crate Actix-Web integration for Askama templates meet for building website Web Front-End for Wave-Insight A helper for handlebars that adds markdown rendering A modern LaTeX alternative A minimal templating engine that renders a string from the template, replacing all instances of {placeholder} with given values A simple cli tool that renders Tera templates using variables defined in JSON files A filesystem tool that will copy a folder structure and if there is provided templating data when it encounters any .tpl files, it tries to fill it using Handlebar syntax and prints out the transformed version Block repetition helper for handlebars A simple rust static site generator suite Atom Feed Template for RDXL Sigma 0 is a Simple, Safe and Fast Template language A whitespace- and memory-friendly template engine A static homepage generator Library for punktf, a cross-platform multi-target dotfiles manager Generate documentation in multiple formats Core liquid functionality Template engine based on Jinja2/Django templates AWS CloudFormation Template Generator A template system for codegen in Rust Substitutes the values of environment variables, but with handlebars Helper collection for yarte A rust implementation of the dustjs template engine Generates Content from Archetype Template Directories and Git Repositories handlebars and toml based simple and flexible static page/code generator library Shared code for the far crate mdBook preprocessor for variable interpolation using the Fluent language Render a LaTeX & Handlebars template into PDF a handlebars template expansion library Helper collection for wearte HTML templating with composability in mind Render Handlebars template files using environment variables A static site generator with support for handlebars templates and markdown A document generator for GOSH Drive FHIRworks2020 Hackathon Generated by template 'rustyhorde-lib-template' by cargo-generate Pretty diff to html Rust library (diff2html) Compiled text templates (not unlike Mustache and Handlebars), with support for expressions and custom functions inside such expressions Macros used by mini_template A super simple templating library for Rust Handlebars template CLI that allows for passing in values to replace place holders in file. It can also do more complex things like pass in an input json file and output a file or send it to stdout... Lightweight, fast, and powerful templating engine A template for Rust programs A simple template engine for rendering to the terminal An intuitive and powerful template engine Templates inside your Rust code Substitution like envsubst, but can escape Mixin Markup Language runtime dependencies Rust implementation of Mustache Intermediate representation for yarte A set of helper functions for the templates to work with gtmpl template system Project template for a Rust library CLI Http Client. Built-in support for building JSON bodies & more. Serialize a serde::Serialize item to a JavaScript literal template using serde_json Simple document generator from yaml template This crate allows for jsx html inline like syntax in rust handlebar template function helpers Code generator for OpenAPI specifications Helper functions for NaTE Lint plugin for the Maud template engine Template functions for Go templates for Rust lightning fast templating engine A tiny video portfolio generator Template library for Megumax project Brix's simple wrapper around handlebars with added helpers rulegen takes a CloudFormation template and autogenerates a set of cfn-guard rules that match the properties of its resources. This is a useful way to get started rule-writing or just... A lightweight XML template engine Configuration functions for PepeTeam template application A fast and simple template engine Templating language for the foreign crate Flexible Mustache template rendering for nickel A crate to simplify working with Tide and Handlebars A tutorial for publishing Rust packages Simple, small, and extremely fast template engine for Rust. Forked from SailFish, now it's a black marlin. Catsay is a simple, fast, and free cat-based ASCII art generator The liquid templating language for Rust An ultra simple no hassle static site generator A HTML template system for Rust A simple project generator A library for implementing turn based games logic my competitive programming template A set of parsers, evaluators and compilers for text templates Runtime variable substitution in Handlebars using Fluent templates Tide integration for Askama templates
